Dear Cleveland Clinic Biostatistician Search Committee:

I was delighted to see that the position of Biostatistician in Quantitative Health Sciences is available. I was particularly pleased to see that my work experience and academic research align with the criteria stated in the position description.

I am a trained statistician with a diverse background in applied statistics. I have research experience in survey sampling, labor economics, health science, and statistical programming. Among these, I particularly enjoyed working on health science, where I always saw positive impacts on peoples. My health science research and consulting include my master's thesis on effects of smelters on blood lead levels of children living in nearby communities, preparation of a brochure publication based on National Health Interview Survey for members of the Congress, helping surgeons drafting statistical section of case studies for professional publication, and tutoring public health Ph.D. candidates on analyzing National Cancer Registry database. I also worked for two summers as a graduate intern at Pfizer and Merck, where I participated in the design and analysis of clinical trials. Through these projects, I gained a deeper understanding and appreciation for health science. Career development potential and my enjoyment in health science motivated me to pursue the Biostatistician position at the Cleveland Clinic.

I believe that my diversified statistical research experience, combined with my studies in health science, will enable me to work effectively as a Health Science Biostatistician at the Cleveland Clinic Department of Quantitative Health Sciences.

I welcome the opportunity to discuss my qualifications further and will be in touch with you. Thank you for your time and consideration.

Sincerely

Bogong Timothy Li, Ph.D.
